BRAKE DISCS & PADS

ROADLINK

BRAKE PADS

Covering most popular European truck, trailer and bus applications, Roadlink's range of high performance brake pads provides a "performance and value" disc braking package.

Roadlink brake pads are manufactured to European braking regulation ECE R90 in facilities with quality systems accreditation to ISO9001/TS16949, using high performance RF400I friction material, formulated and produced exclusively for Roadlink.

In comprehensive benchmark tests against several premium OE material grades RF400I friction material has been found to combine stable, high performance with exceptional pad and disc life, across a wide range of vehicle applications and operating conditions.

Dependent on application Roadlink CV brake pads have the benefit of:

- Multi level material bonding, including steel mesh fixing technology.

- Application of a unique surface coating to aid faster "bedding in"
- Pad accessories included where required
- High quality R90 approved packaging with contemporary eye-catching design

RF400I friction material delivers performance at least comparable to major OE grades – and value that is hard to beat. Used in conjunction with RI branded OE quality fitting components, wear indicators and RI brake discs, Roadlink CV brake pads provide a fully integrated disc braking solution.

ROADLINK

BRAKE DISCS

ROADLINK INTERNATIONAL®

Roadlink's extensive range of over 200 disc references covers most of the popular CV, PCV and LCV applications demanded by today's market.

At the heart of our brake discs are OE quality castings manufactured in environmentally-friendly world class foundry and moulding production facilities using only the highest quality raw materials.

During production, the quality of our disc castings is closely monitored by non destructive x-ray and spectrum testing, guaranteeing that castings are produced consistently to the highest quality standards.

All machining processes are carried out on modern fully automated OE precision production lines, equipped with integrated systems to dynamically balance each disc.

Performance, noise and vibration testing is carried out on finished discs using state of the art dynamometer facilities to simulate on-vehicle brake operation, as a part of a comprehensive ongoing product development programme.

ROADLINK

The Roadlink branded range of OE quality braking products includes:

Brake discs

Brake drums

Brake linings and rivets

Exchange brake shoes

High performance brake pads

New lined and unlined brake shoes

Pad fitting kits and wear indicators

Remanufactured brake calipers
